

NARENTINES

Narentines is a collection of 8888 unique NFTs of 100+ traits, sailing on SOLANA blockchain seas. The main goal of this project is to provide fun and excitement, while connecting with other people, and learning historical facts through gamified experience where players can also earn \$GOODS tokens.

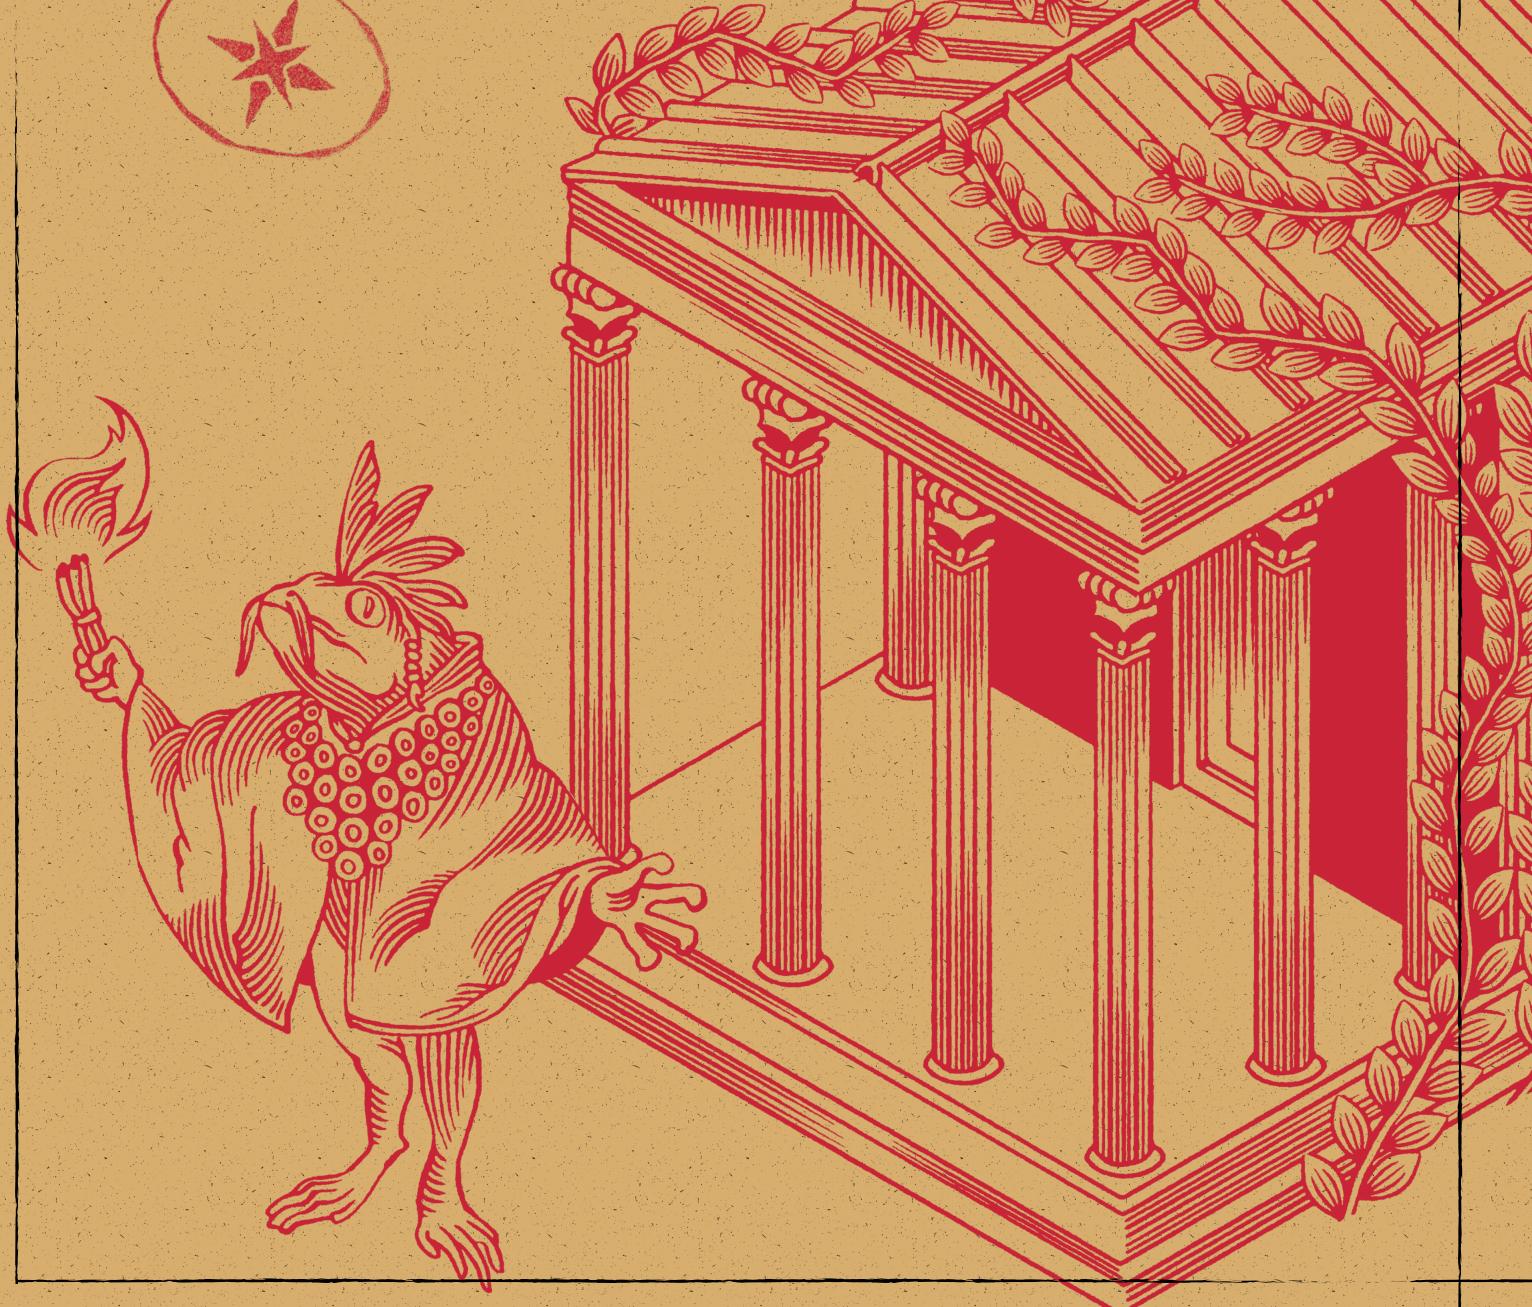

How did the story start? It took six friends, who were amazed by local history from early on, and their newly found passion for NFTs to create an exciting combination of the two, NFTs dressed in enchanting history-inspired myths and legends. Especially the ones about

infamous pirates whose froggy form has nothing to do with the frog prince charming, but more so with a gourmet delicacy that leaps out of the Narenta river, today called Neretva. Since frogs are the trademark of the valley where Narentines comes from, we decided to build our story around pirate frogs.

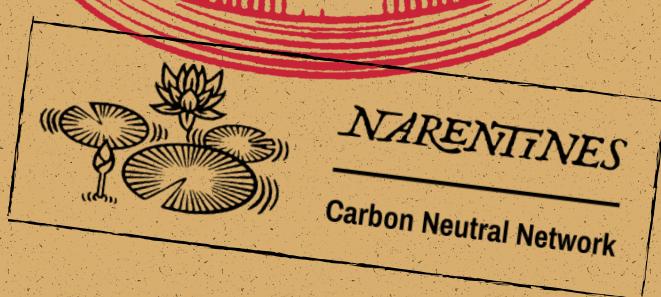

Each part of the game is based on actual historical facts, so playing the game allows the player to learn a lot. Every name, ship, action, and battle happened at some point in history, there was no need to invent new names when history already provided us with a bunch, and it is up to you, my fellow pirate to match the pieces and find out what happened when and where.

The principle of the game will be straightforward, and you will initially send your ship on expeditions to the Adriatic Sea. Later PVP battles will be included, alongside the ability to create clans and reward the best in the form of real-life prizes you have never seen in the NFT world.

Our further plans are to organize new game modes, ranking, and reward systems, and although it seems like a lot of work, you better believe that this team never sleeps. We believe that you will enjoy our play to (l)earn game, a combination of old (history) and modern (NFT), and (l)earn something along the way.

Solana, as you might know, is using proof-of-history, which with its name fits perfectly into our idea of history-inspired play to (l)earn game. The Solana blockchain is eco-friendly, so off-chain frogs will live more peacefully. Our team at Swamplabs believes that we have a unique design that has not been seen on the blockchain so far and that everyone will be swept off their feet with Narentines.
